

INTRODUCING

CIV

Consent Identity Verification

Available in

TazWorks Software™

Help protect your clients from fraud

ABOUT CIV

Consent Identity Verification (CIV) is a new feature available through **QuickApp**. Data breaches and identity theft are an increasing threat. CIV provides an additional layer of protection that helps confirm the consumer's identity before they complete the application through QuickApp.

Works with TazWorks QuickApp

HOW IT WORKS

CIV uses a **Knowledge-Based Authentication** method to ask the consumer for information that only they would know. For example, the consumer might be prompted to provide factual statements about a previous address, a vehicle they have owned or leased, or a phone number they have been associated with. The consumer has four minutes to answer before it times out. They can try up to four times before they are locked out for seven calendar days.

PRICING & AVAILABILITY

CIV is now available to QuickApp users. Pricing is based on successful and unsuccessful verifications. See pricing table. Ask your TazWorks Account Manager for more information about CIV.

CIV PRICING

Successful CIV	\$5.00 ea
Unsuccessful CIV	\$1.00 ea

An addendum must be signed to enable CIV. To enable CIV talk to your Account Manager.
