

RECURRING Background Checks

Stay in the know

Recurring Background Checks are available through **TazWorks Software™**

Maintain workplace safety through Recurring Background Checks

Recurring Background Checks

Recurring Background Checks gives users the ability to rerun a search on an applicant after the initial background check has been completed. Users have robust configuration options and can choose the search, the vendor and the time parameters for the search to recur. The monitoring queue allows for users to manage searches that are active, pending, or ready. Recurring Background Checks provide another layer of coverage for clients, additional revenue for CRAs, is compatible with QuickApp and makes it easier for applicants.

How it Works

Recurring Background Checks can be enabled for any search, using any vendor and any time frame (in months). Once the initial report is complete, the searches configured to recur will appear in the monitoring queue. Users can see when the search is active, when it's been ordered, when it's pending, when it's complete, or when it's ready to be reordered. Users will receive notification before the due date. Searches can also be ordered after the date, cancelled, or skipped, which resets the time. Through this functionality, Recurring Background Checks offers a robust and flexible ordering process for existing applicants and screeners.
